

**Bowman supports the UK's commitment
to net zero carbon emissions by 2050**

12 June 2019 – For immediate release

Following a commitment from British Prime Minister, Theresa May, that the UK will reach net zero carbon emissions by 2050, [Bowman Power Group Ltd](#) (Bowman) has offered the following comments from Paul Dowman-Tucker, their CEO.

“The Bowman team are thrilled that the UK is the first nation to commit to this necessary goal. The UK has long been a frontrunner in tackling the climate crisis, with a vibrant engineering community committed to developing solutions and working with worldwide partners to implement them.

There have been significant strides made with energy efficiency technology within the last decade, both from OEMs and third parties, that have helped set the groundwork for this target.

However, it is clear that much more will need to be done to achieve this in just over thirty years. Further investment in renewable energy and fuel sources, energy efficiency, and carbon offsetting measures will be required to make these goals a reality. Each of these areas will play a key role but the more we can reduce emissions at source, particularly through improved efficiency where fossil fuels are still used, the less we will need to offset which is likely to be costly.

Whilst the UK is one of the nations best equipped to achieve this goal, it's important that our engineering sector doesn't lose sight of the role we can play in promoting these technologies and developments worldwide. For countries with less developed power infrastructures and widely distributed populations, we will have a large role to play in helping them tackle these challenges.

We hope this commitment will see additional investment in technologies to bridge the gap from current fuel sources to renewables and ensure action on a global stage. We are excited to see how this policy will shape the UK's strategy going forward and that of other nations. “

Paul Dowman-Tucker

ABOUT BOWMAN POWER GROUP

Bowman design, develop, install and maintain electrified turbomachinery products for improving internal combustion engines through reducing fuel consumption & greenhouse emissions and improving responsiveness.

Their innovative products help make the power generation and transport markets cleaner and more energy efficient. To date, they have generated in excess of 710GWh of free energy, saved over 350,000 tonnes of CO₂ and removed the need for over \$100 million of fuel to be burnt.

For 15 years, Bowman has developed products to make the use of fossil fuels greener where it is necessary to use them, whilst also easing the transition to clean energy through improving the performance of renewable fuel sources. From their flagship Electric Turbo Compounding technology, of which more than 800 have been installed worldwide, to other forthcoming electrified turbomachinery products, Bowman are committed to this vision.

Bowman is supported by a number of leading investment companies, including [Ombu Group](#) and [Fjord Capital](#). The company is based in Southampton, UK, and employs around 50 staff.
